## Model for *Pinus pinea* Cataluña (Spain)

### Model

Ppinea\_cat\_v01

### Model description

- Specie: *Pinus pinea* L.
- Spanish Forest Inventory (SFI) code: 23
- Geographical area: Cataluña
- Geographical area (administrative): Barcelona, Gerona, Lérida y Tarragona

### Model type

- Category: growth
- Model level: distance independent individual tree model
- Reproduction methods: seedling stands
- Stand structure: even-aged stands
- Species composition: monospecific stands
- Forest origin: natural

### Model requirements and recommended use

- Initial inventory requirements: age, dominant height and basal area of the plot; expan and dbh of the trees
- Geographical area: Cataluña, closer places and another places with similar characteristics (assuming differences)
- Stand type: monospecific stands
- Execution recommended time: 5 years executions (growth equation developed by using that criteria)
- Site Index is defined as top height at a base age of 100 years
